

Nova's premium quality Batu / Red Balau Deck Tiles are the ideal solution for close to ground and flat surface hardwood deck applications.

Perfect for small concrete patios, condominiums, apartments, roof top decks and more.

**WOOD DECK TILES | SAME HIGH QUALITY BATU, RED BALAU – MADE EASY TO INSTALL**

Deck tiles have grown in popularity, and for good reason. Deck tiles are amazing. Here's why: They are highly versatile, have the ability to create patterns, are quick and easy to install, can be installed on pre-existing structures, and can be moved to a new location easily. Nova is proud to now offer Nova Batu (a.k.a. Red Balau) Deck Tiles, which use the same remarkably high quality hardwoods as our residential and commercial decking products.

**NOVA DECK TILES**

Nova carries 24"x24" Deck Tiles in the same Batu as our renowned high quality exterior decking line. Each deck tile features nine nominal 1x3 pieces running parallel to one another. The bottom support of the deck tile is formed using an additional 3 pieces of matching hardwood. The first two pieces run along the bottom edge of the tile perpendicular to the top pieces, the third support board runs in the center of the board also perpendicular to the top pieces. All material is assembled with stainless steel fasteners for long term durability.

**INSTALLATION**

Deck tiles can easily transform any flat surface into a gorgeous living space. One of the things that makes Deck Tiles unique is that they can often be installed directly on top of a pre-existing flat surface such as a cement patio or balcony. By laying them parallel to one another or perpendicular you can create a variety of looks using the same types of tiles.

This "place-on-top" style of installation allows for an easier install for homeowners and families looking for a weekend project that will bring warmth and beauty to their living space. In addition, it allows the user to have a beautiful hardwood deck on top of a patio without building the framework. Deck Tiles are a game changer for those who rent their properties or homes because they are easy to both install and un-install and can be taken to a new location when needed. This means that the landlord won't have to worry about the leftover structure and the renter won't have to lose out on their investment!

Nova's deck tiles are 100% compatible with the DeckWise pedestal support system and snap together tile clips.

**CUTTING DECK TILES**

**PERPENDICULAR TO THE TOP**

Cutting the Deck Tiles is actually more simple than it looks. To cut perpendicular across the tile, begin by unscrewing the center support beam featured on the bottom of the tile. Now you can make your perpendicular cut. After sawing the desired amount off, remove the outer-support from the side that you won't be using. You can now install that outer-support on the new edge of the cut piece. Once this has been done, take the center support beam and re-install it in the center of the freshly cut Deck Tile. Now you have a custom sized tile!

**PARALLEL TO THE TOP**

When cutting parallel to the top boards on the tile, remove the center support from the bottom of the deck tile. This should leave you with a ready-to-cut tile. Next, cut the tile at your desired width. Now you can re-install the center support accordingly. If there is no longer enough room to install the center support, you can forgo this process. However, we recommend re-installing the center support so long as it fits into the center of the freshly cut tile. Now you have a custom sized tile!
