

PRODUCT SELECTION

Nova offers siding in three distinct hardwoods: Ipe, Cumaru and Batu. Using our standard three hardwoods we are able to provide a multitude of patterns and finishes which allow customers to create and design the perfect look for their home.

Siding patterns available include Bevel, Rainscreen, Fineline Reveal Shiplap, Standard S4S Board Siding, T&G Paneling and Beaded Ceiling.

Please note that it is extremely important to leave an air gap between the exterior of your home and the boards in order to allow for the wood to breathe. Siding patterns typically swell up to 1/8" in width during humid times of the year - be sure to allow for expansion.

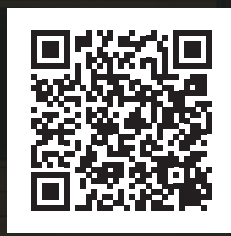

ENVIRONMENTAL INFORMATION

We are committed to the preservation and responsible utilization and management of our forest resources. We strongly encourage all supply partners to follow the best industry practices to minimize damage to the environment and ensure long term resource sustainability.

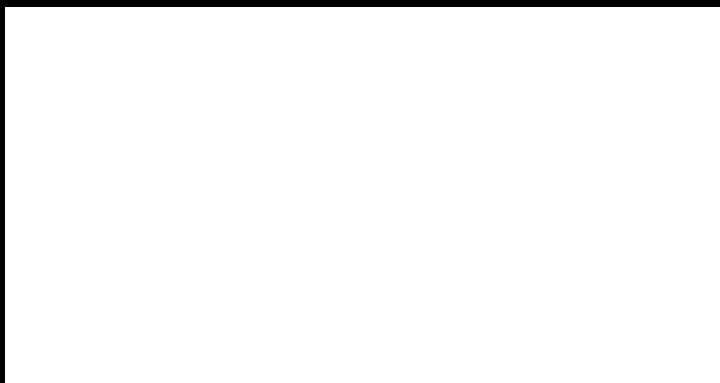

DISCLAIMER

Our siding products are carefully manufactured and inspected to ensure quality. However, these are natural wood products and are subject to variations in weight, density, color, grain and performance. Wood siding is naturally subject to dimensional changes as the moisture content in the wood fluctuates with humidity in the air. Swelling, shrinkage, checking, and other movement of individual pieces are normal occurrences in wood siding. Local building codes must be consulted when installing real wood siding.

Our siding is imported by Nova USA Wood Products and distributed in your area by:

See www.novausawood.com for more information.

Siding

PREMIUM HARDWOOD SIDING
BEAUTY | PERFORMANCE | VALUE

Natural Beauty and Durability

Fine outdoor architecture demands the highest quality materials. With rich natural beauty and legendary durability, our line of hardwood siding products are the highest quality natural wood products available and a practical choice to add strength, lasting beauty, and long term value to any home.

Our hardwood siding products are engineered by nature to withstand the test of time. Professional builders and do-it-yourselfers alike choose our products for their high quality, high performance and consistency. You can be confident when you choose hardwood siding from Nova that you are selecting the best high performance hardwoods on the market.

For Rainscreen applications, we recommend Nova's patented resilient Rainscreen Clip System. Our ExoClad QuickClip is the only system which allows for natural expansion and contraction of wood siding.

Features and Benefits

- Distinctive Grain & Rich Color
- 8'-20' Even Length Only Tallies
- Kiln Dried for Maximum Stability
- ASTM Fire Tested - Class A
- Insect Resistant
- Rot & Decay Resistant
- Resists Checking
- Excellent Natural Durability
- Long Term Sustainability
- Easy to Install
- 25 Year Warranty*

** when installed according to guidelines*

Protecting Your Siding

When it comes to finishing your wood, Nova's ExoShield is the ultimate choice for an easy to apply and long-lasting wood finish providing premium protection from UV rays and moisture.

Using a pure Tung oil base, trans-oxide pigments, and a built-in fungicide, ExoShield is a one-coat formula capable of getting up to 800 SF of coverage on hardwoods. Not to mention, ExoShield is made in the USA, marine-grade and low VOC. Why compromise? We didn't.
