

ENGINEERED HARDWOOD MOUNTING BLOCKS

ENHANCED DURABILITY

Performance-Driven. Cost-Effective. Built to Last.

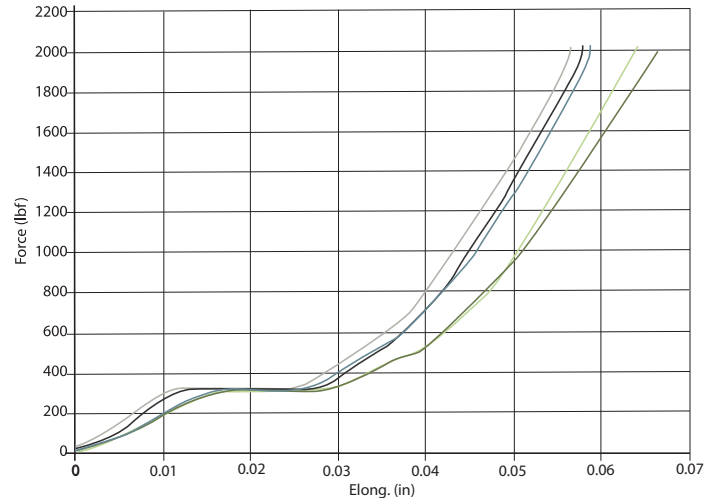

Looking for the perfect balance of strength, reliability, and value in your truck or trailer body mounting system? Nova's Engineered Hardwood Mounting Blocks deliver unmatched performance in a lightweight, moisture-resistant package that outlasts the competition.

These mounting blocks combine superior compressive strength, exceptional dimensional stability, and long-term durability—making them ideal for demanding commercial and industrial applications. Each block is primed and undercoated on all sides, creating a sealed barrier that keeps out moisture and minimizes the risk of swelling, cracking, or rot.

Compared to softwood laminated veneer lumber (LVL), Nova's hardwood blocks are more durable under heavy load conditions. And unlike Apitong, they come at a significantly lower cost, giving you the best of both worlds.

PRECISE FIT

Available in standard and custom sizes, machined for fast, hassle-free installation. Whether you're upfitting fleet vans, building custom truck bodies, or replacing worn-out mounts, you can count on Nova for dependable quality.

HIGH STRENGTH - LOW COMPRESSION

Nova's Engineered Hardwood Mounting Blocks are built to provide high compressive strength and superior load-bearing capacity for demanding truck and trailer applications. Their natural vibration-dampening properties reduce road shock, enhancing vehicle stability and ensuring smoother rides. This not only protects the chassis but also safeguards your cargo integrity, reducing the risk of damage during transit.
